- ・ Withdrawal Buttom （3 type） / 引き出しボタンの設定
 - ↳ p20 MOBILE-BALANCE / APP-DEP-00 and Tablet

GLOSSARY / VOCABULARY

User. The person who has a basic account (simple registration) with Coiney and use the application.

Shop. The person who complete the application form and can accept Credit Cards payments with Coiney.

Client. The customer who buy from the user / shop.

Item or Product. Article that the user sale and the client can buy.

Library. All the products that are registered in the application and can have name, picture and types (or variations).

Product Type. Same product can have difference variations in sizes, shapes or colors. User can add them here with different prices.
Example:
- Coffee sizes. *short, tall, grande, venti.*

Library Grid. View of the Libray made of big images arranged in a grid.

Library List. View of the Library made of rows arranged in a list.

Category. Group of products.
Example:
- Alcoholic drinks, Soft Drinks, Sandwiches...

SCREENS / VIEWS

In order to bring coherence and improve the communication between the persons involved in the project, every screen / view has been assigned with standard ID and a NAME.

VIEW ID. Made of 4 or less characters and a two numbers.

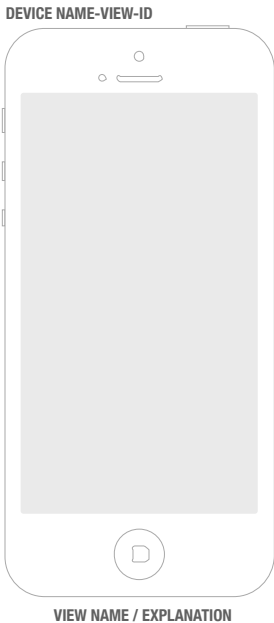

VIEW NAME. Self explanatory view name.

So when you can report a bug / idea / something missing... you make reference to this VIEW-ID.

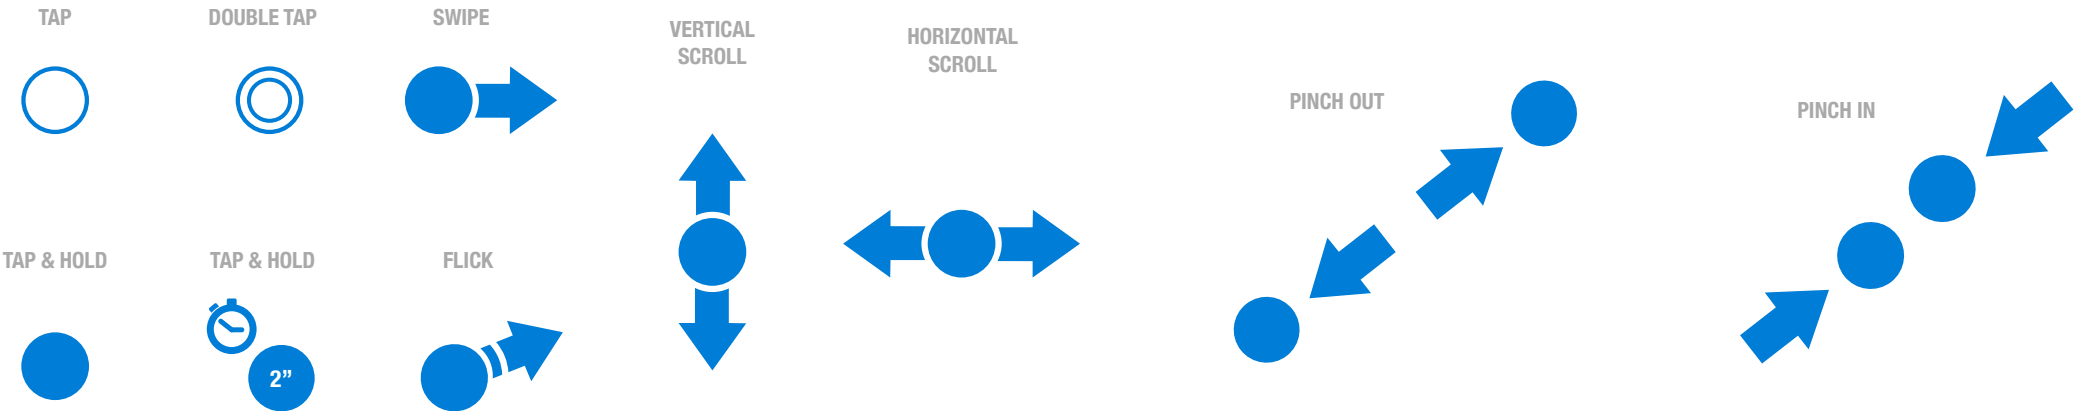

Because we are targeting different devices we should use a full ID:

DEVICE NAME + VIEW-ID

Example: IPAD-MAIN-00

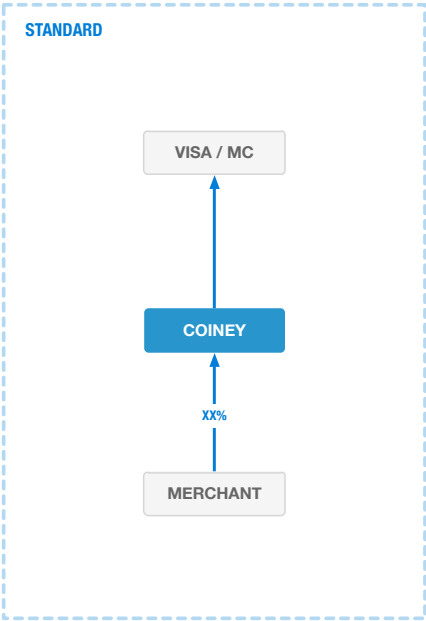

TOUCH GESTURES ICONS

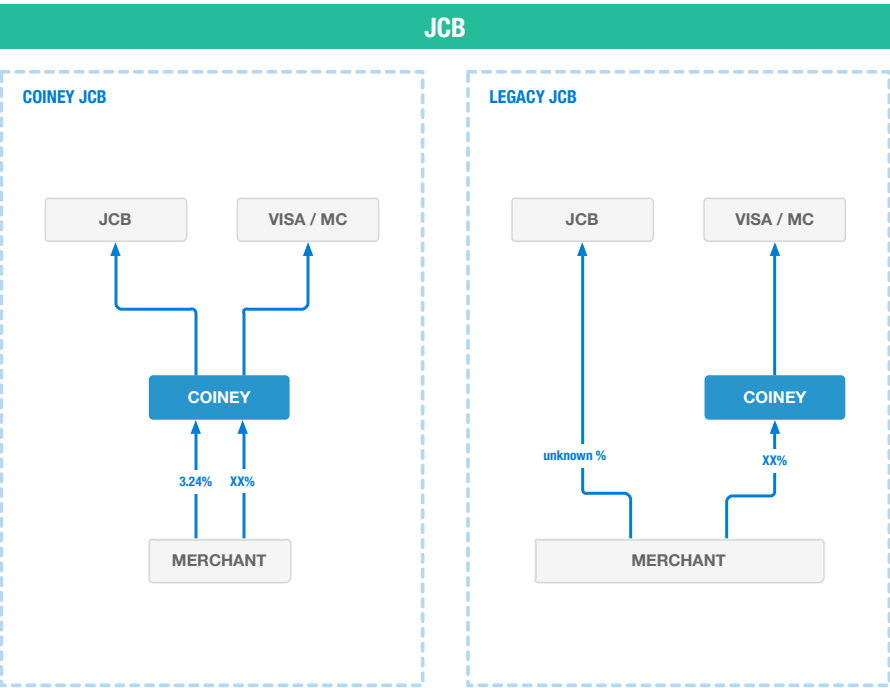

ABOUT JCB

There are 3 cases:

- Standard**
- Clients that didn't apply for JCB
 - Clients that didn't pass the JCB requirements
- Transactions are managed by Coiney.

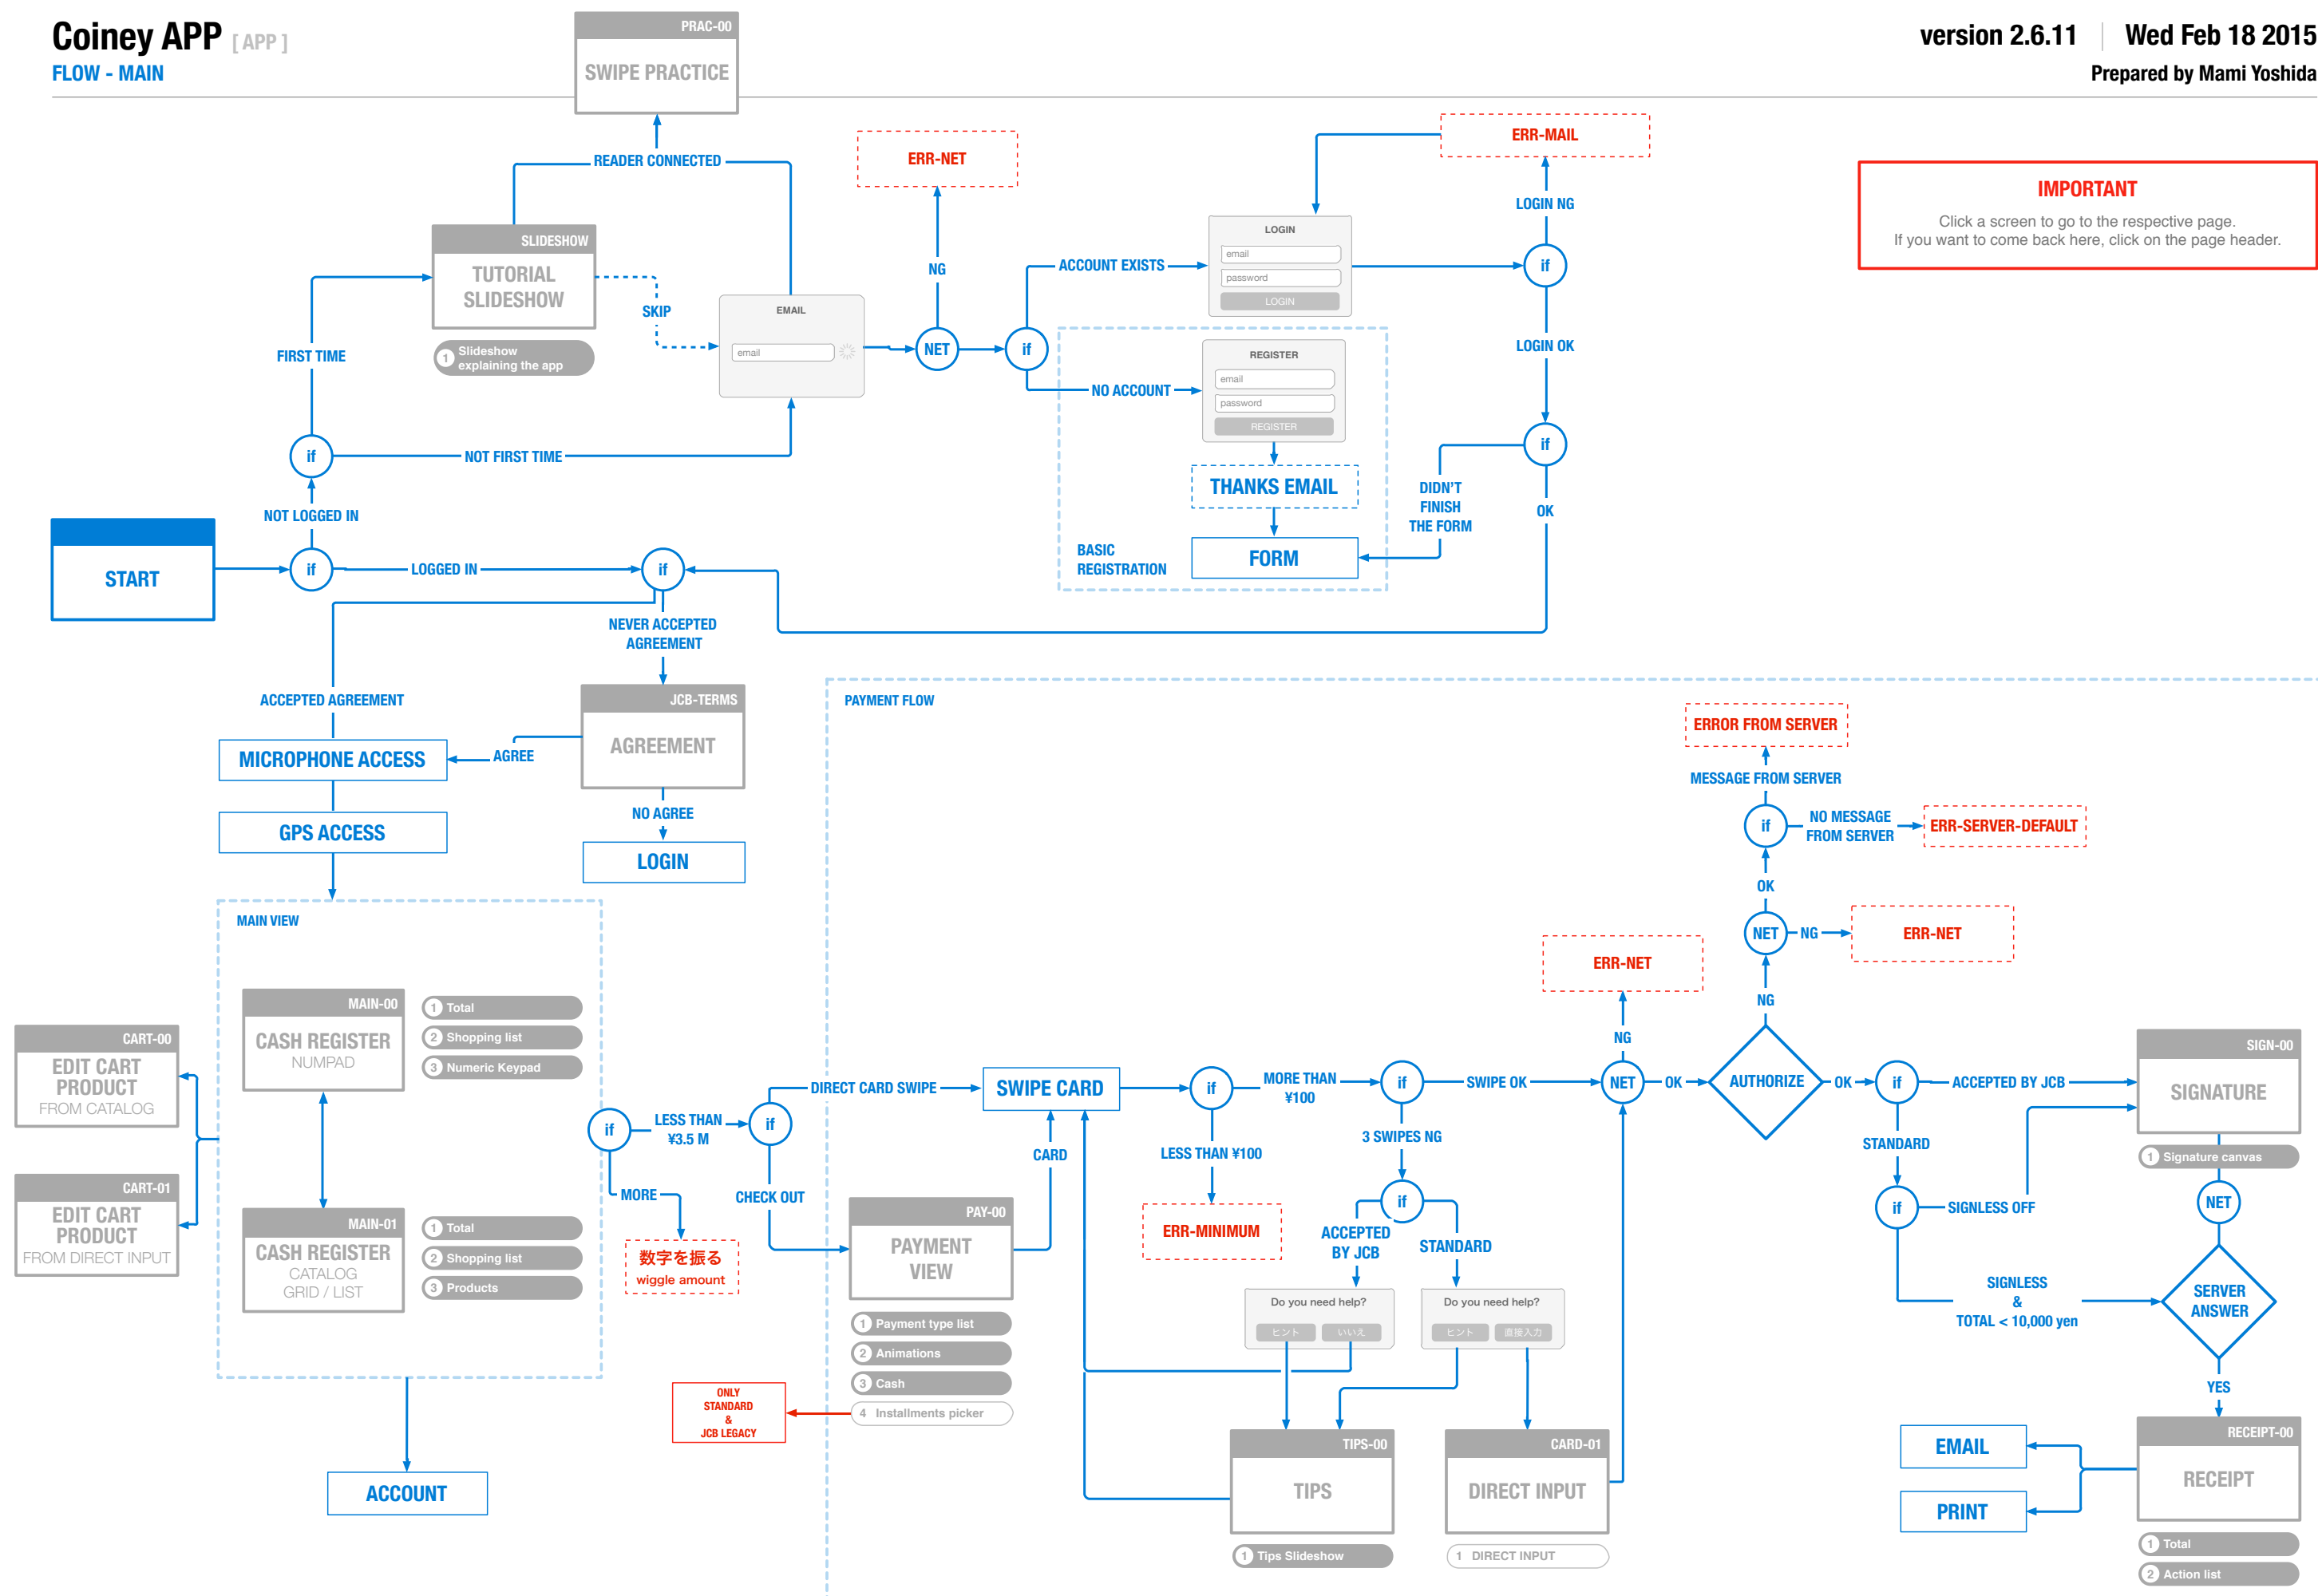

- Coiney JCB**
- All transactions are managed by Coiney, but Coiney percentage fee depends on the merchant.
- DON'T ALLOW**
- Installments
 - Signless
 - Credit card direct input
- Legacy JCB**
- JCB transactions are managed directly by JCB, we don't know details like what cards can they use or what percentage they are taking.
- DON'T ALLOW**
- Signless
 - Credit card direct input

ABOUT INSTALMENTS

These are the possible options:

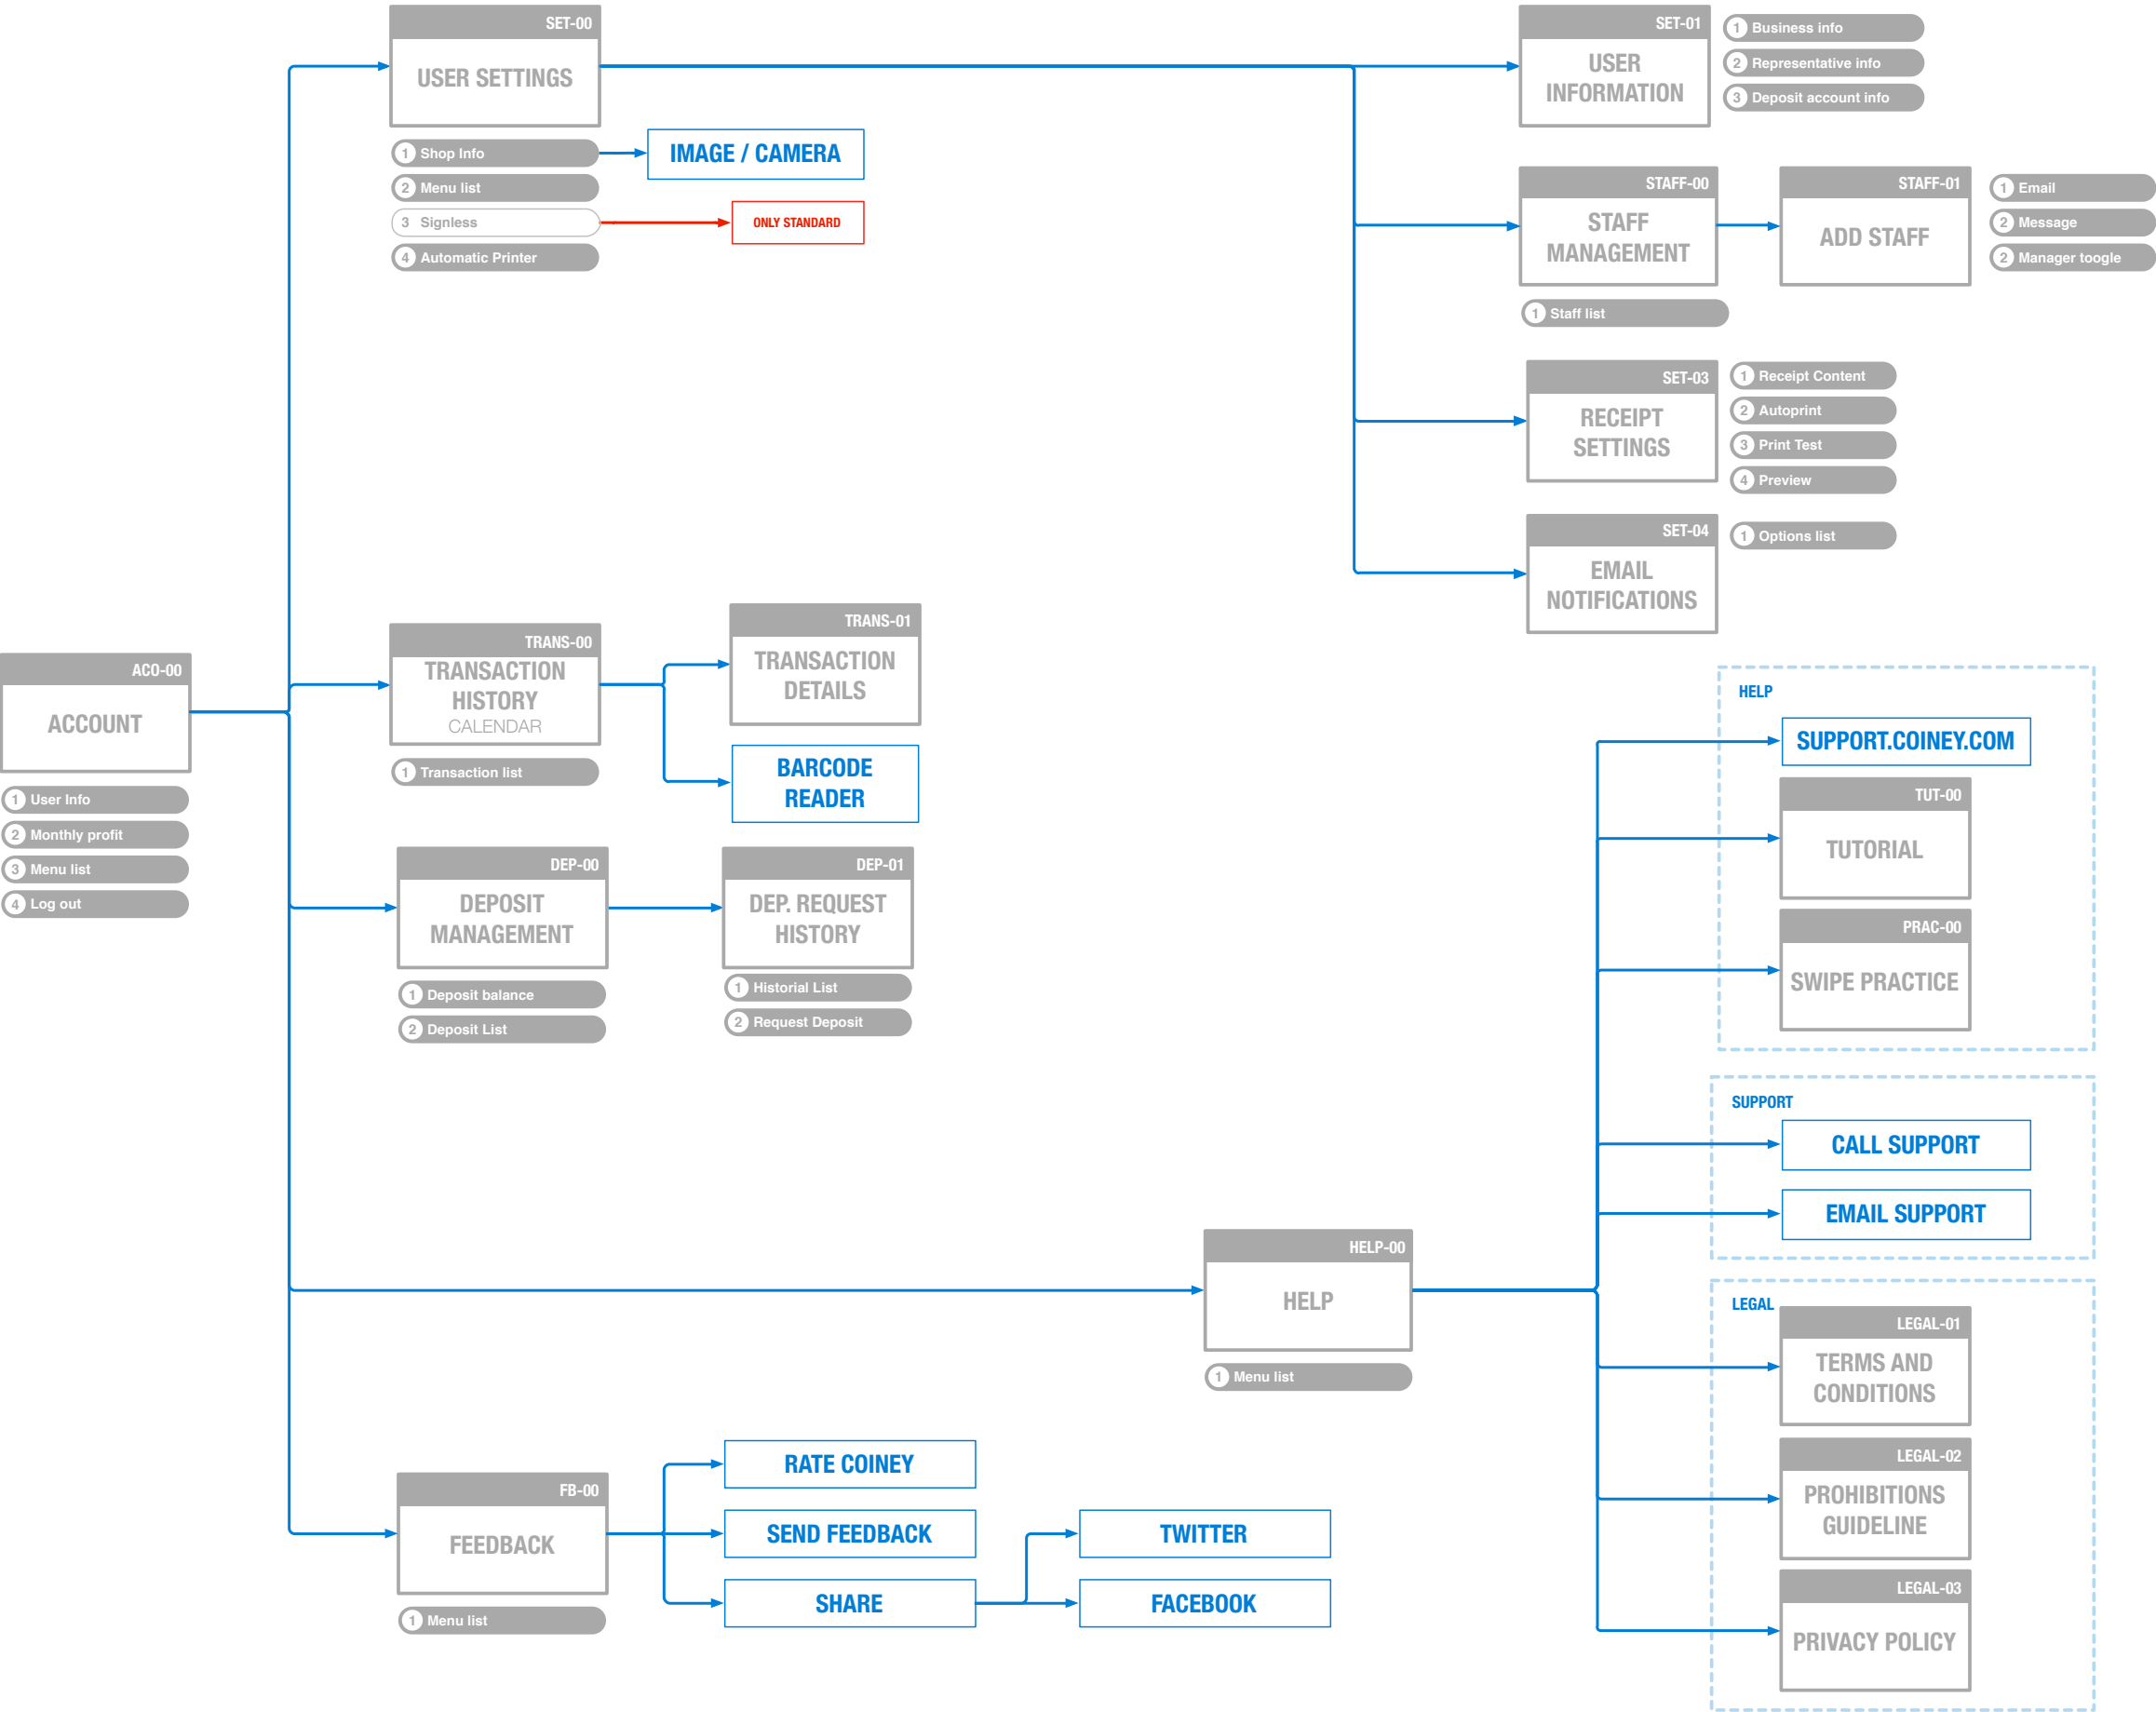

- 一括払い
- 3 回払い
- 5 回払い
- 6 回払い
- 10 回払い
- 12 回払い
- 15 回払い
- 18 回払い
- 20 回払い
- 24 回払い

LOGIN

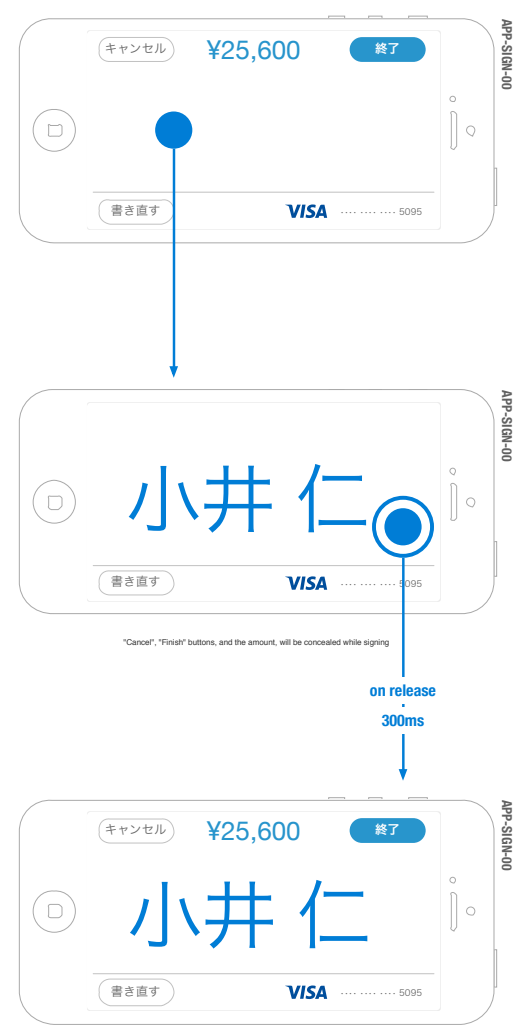

ANNOTATIONS

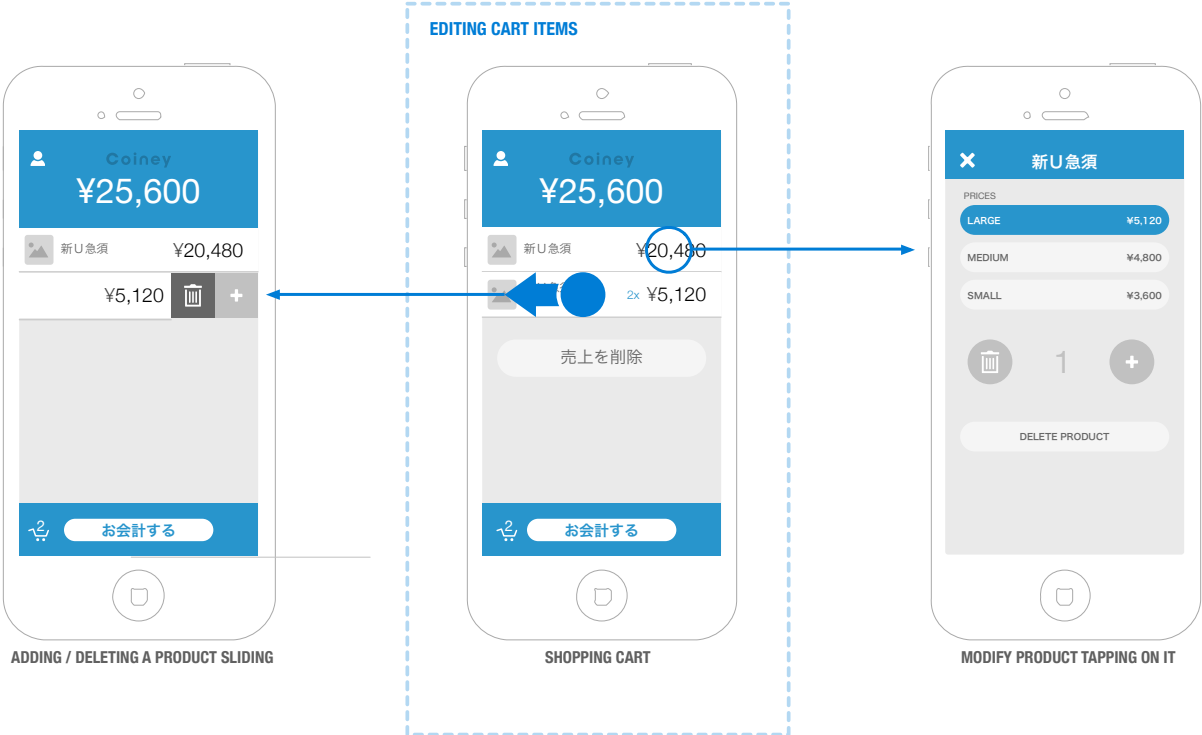

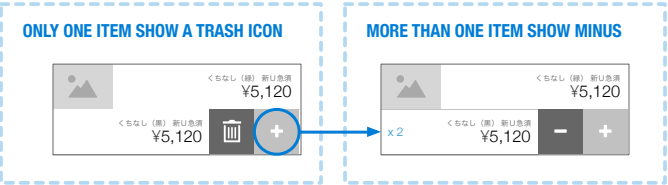

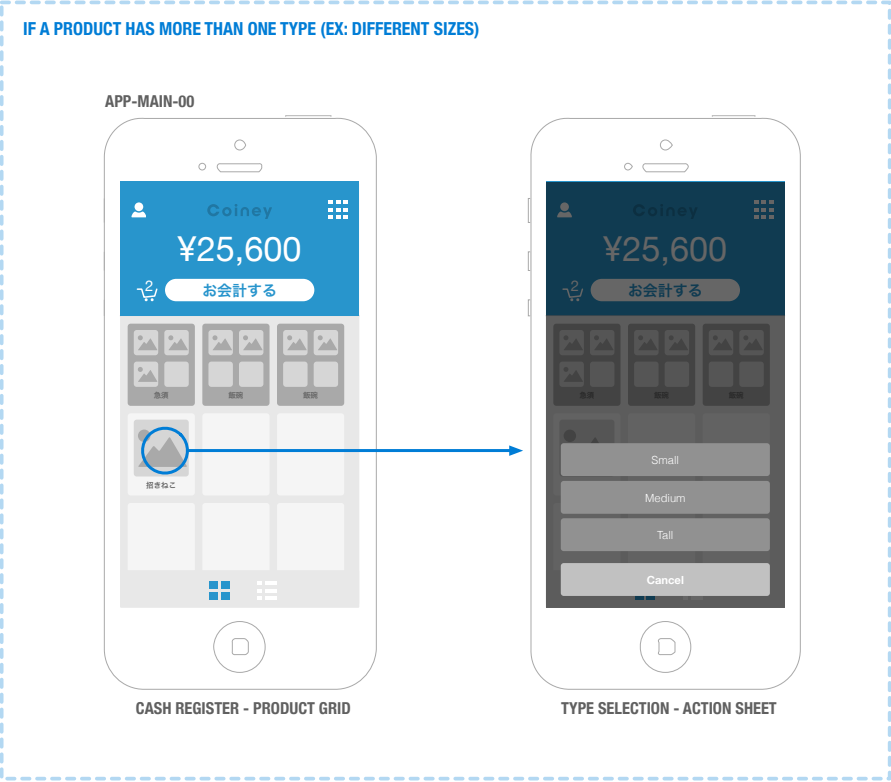

- 1. One field Login / Registration.** In order to simplify the Registration and Login in the first contact with the application and improve the User Experience this step has been reduced to a unique form field. The label should be clear enough to understand you can both things here. Example: 'To Login or Register enter your email here'
- 2. Check if user exists.** After the user introduce the email and the application will check that it is a correct formatted email and then check with Coiney DB if the user exists.
- 3. User exists.** If the users exists, the label will change to 'LOGIN' and an green check icon will be appears inside the field to indicate it has been checked. A new password field and a login button will be appear with a nice animation.
- 4. Forget password button.** Instead of using a "Forgot your password" link, using a simple question mark button won't take up a lot of room. Because the question mark is a universal symbol for help, users will not wonder where to go when they're having password trouble.
- 5. User does not exist.** If the users does not exist, the label will change to 'NEW REGISTRATION' and an 'NEW' icon will be appears inside the field to indicate it has been checked and it will be a new registration. A new password field will appears with a self explanatory label like 'Enter a password you can remember' and a placeholder indicating the rules for the password, like: 'At least 8 characters'. A 'Agree and Continue' button and a short explanation will be appear with a nice animation.
- 6. Fix mail address.** In case the user wants to type other different email address, tapping on the email field will be back to the step 1 with a nice animation.

FEATURE: CASH

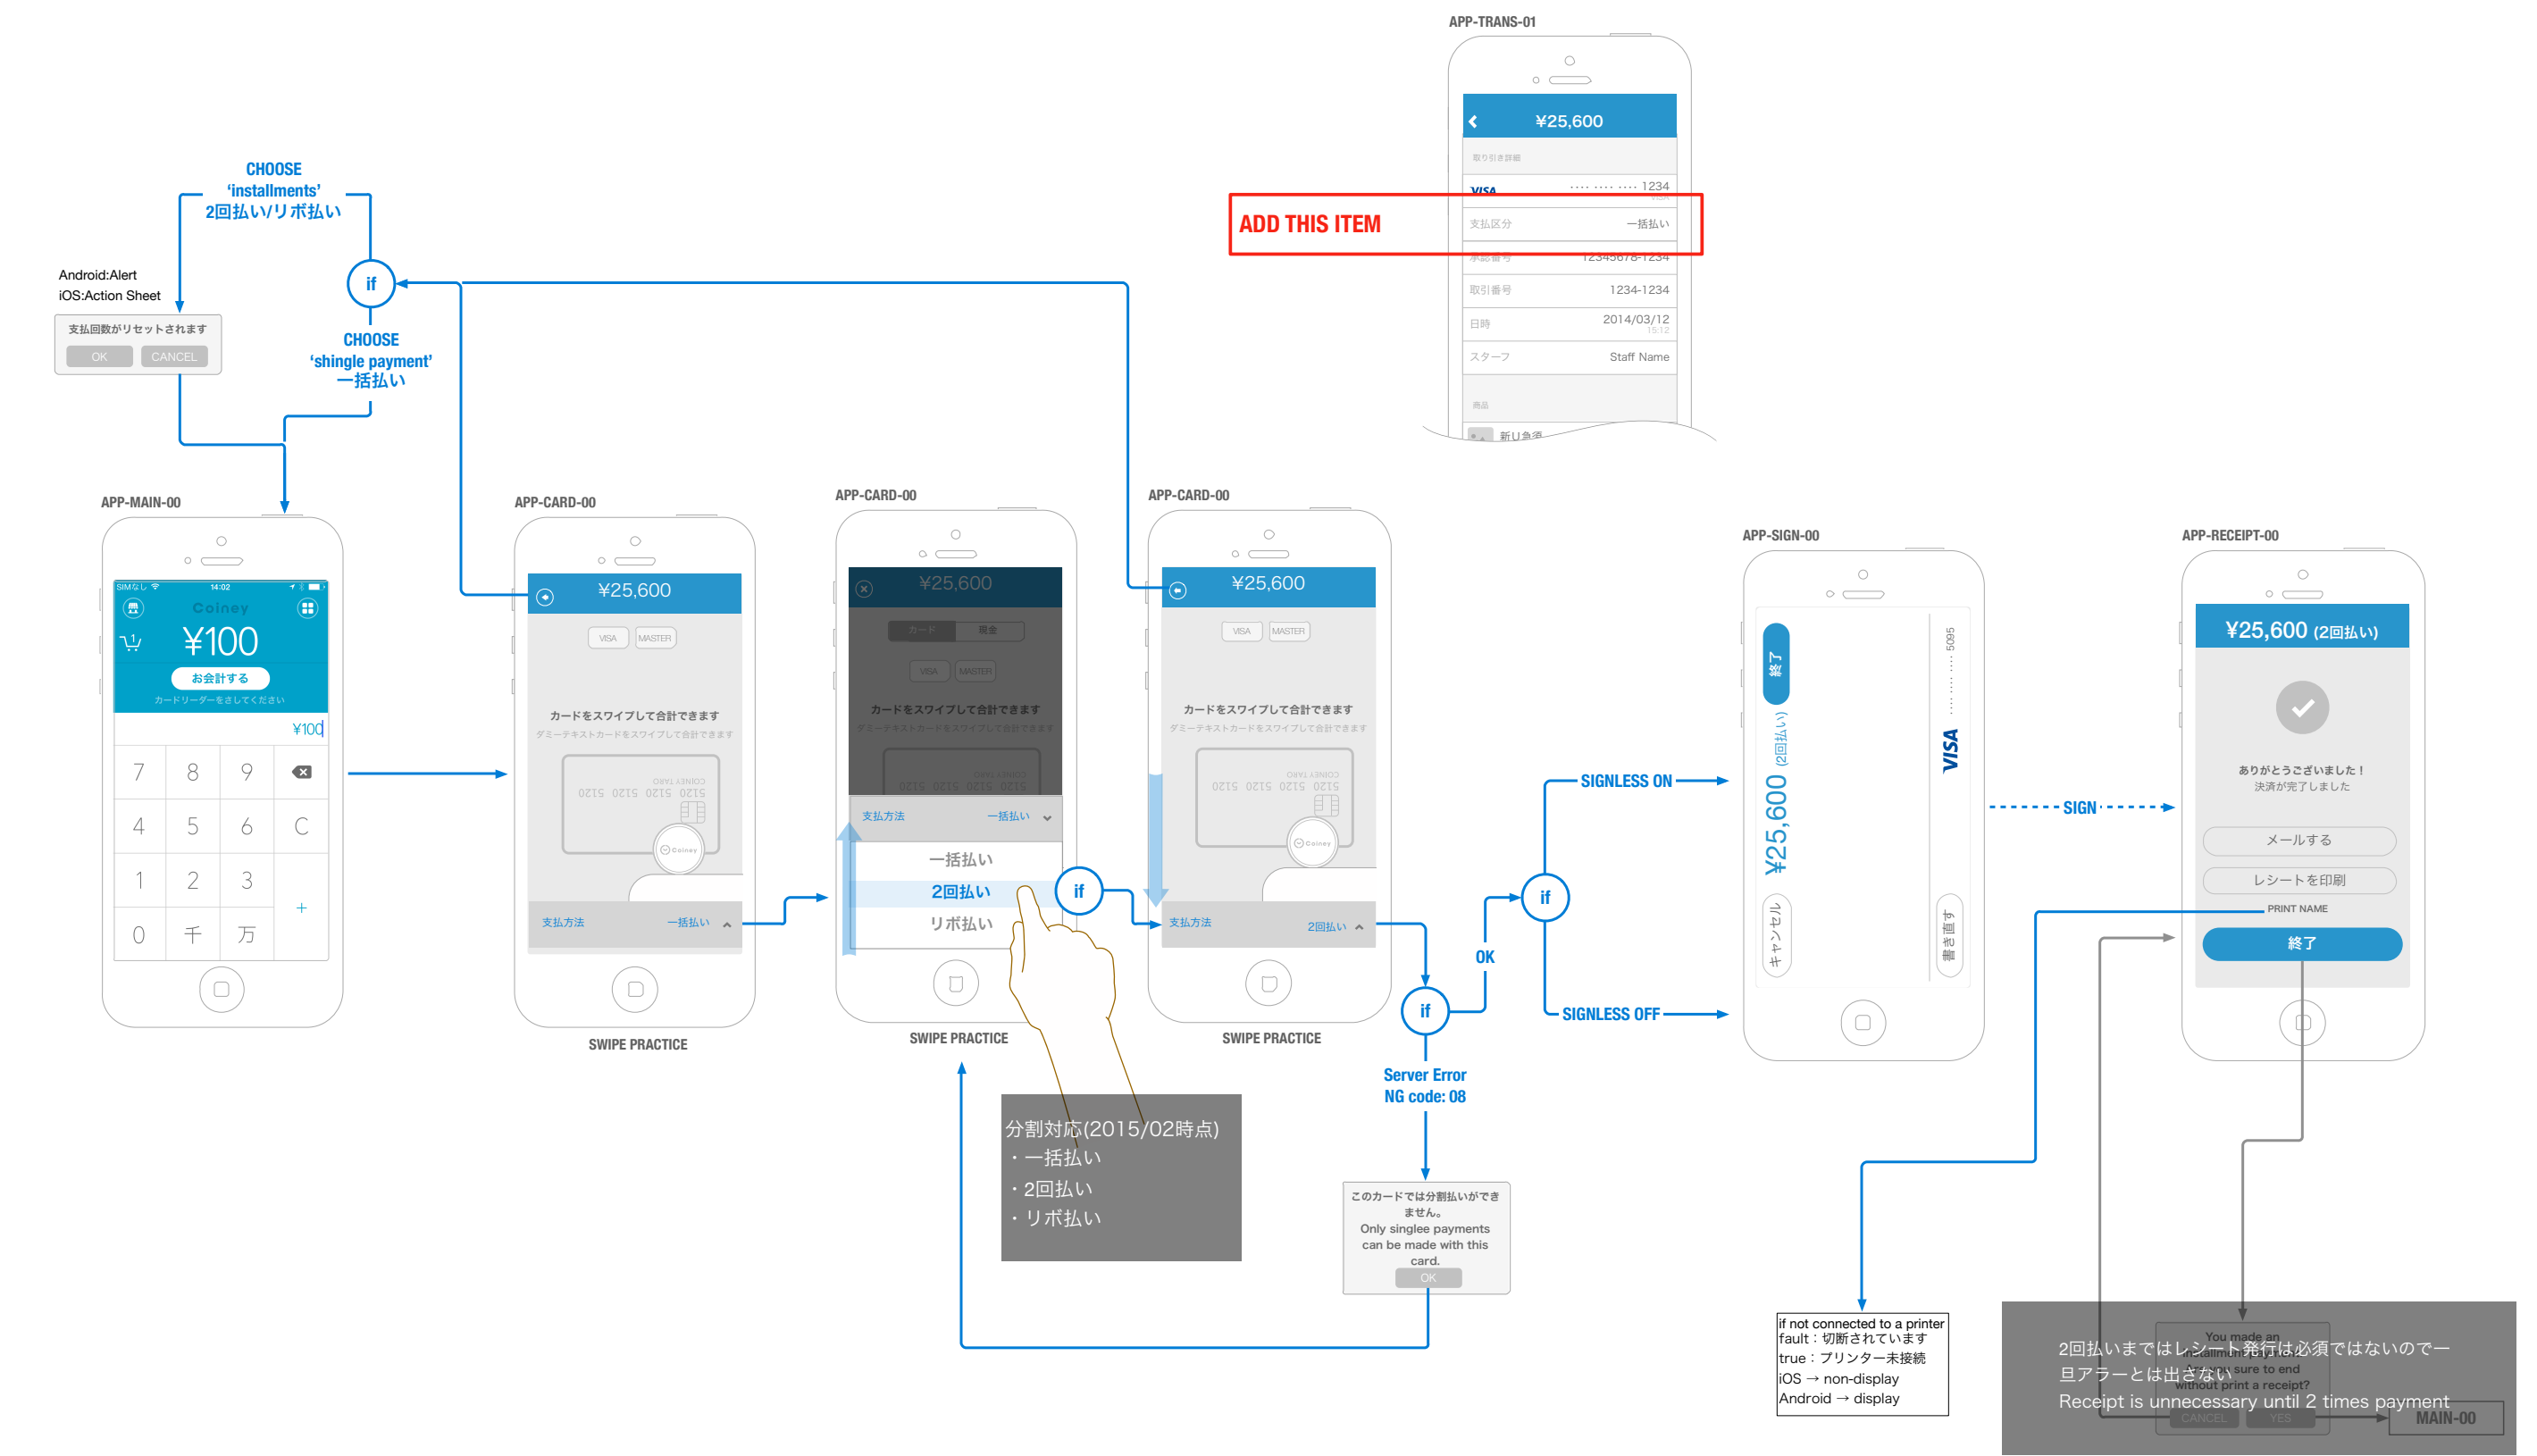

TABLET-CASH

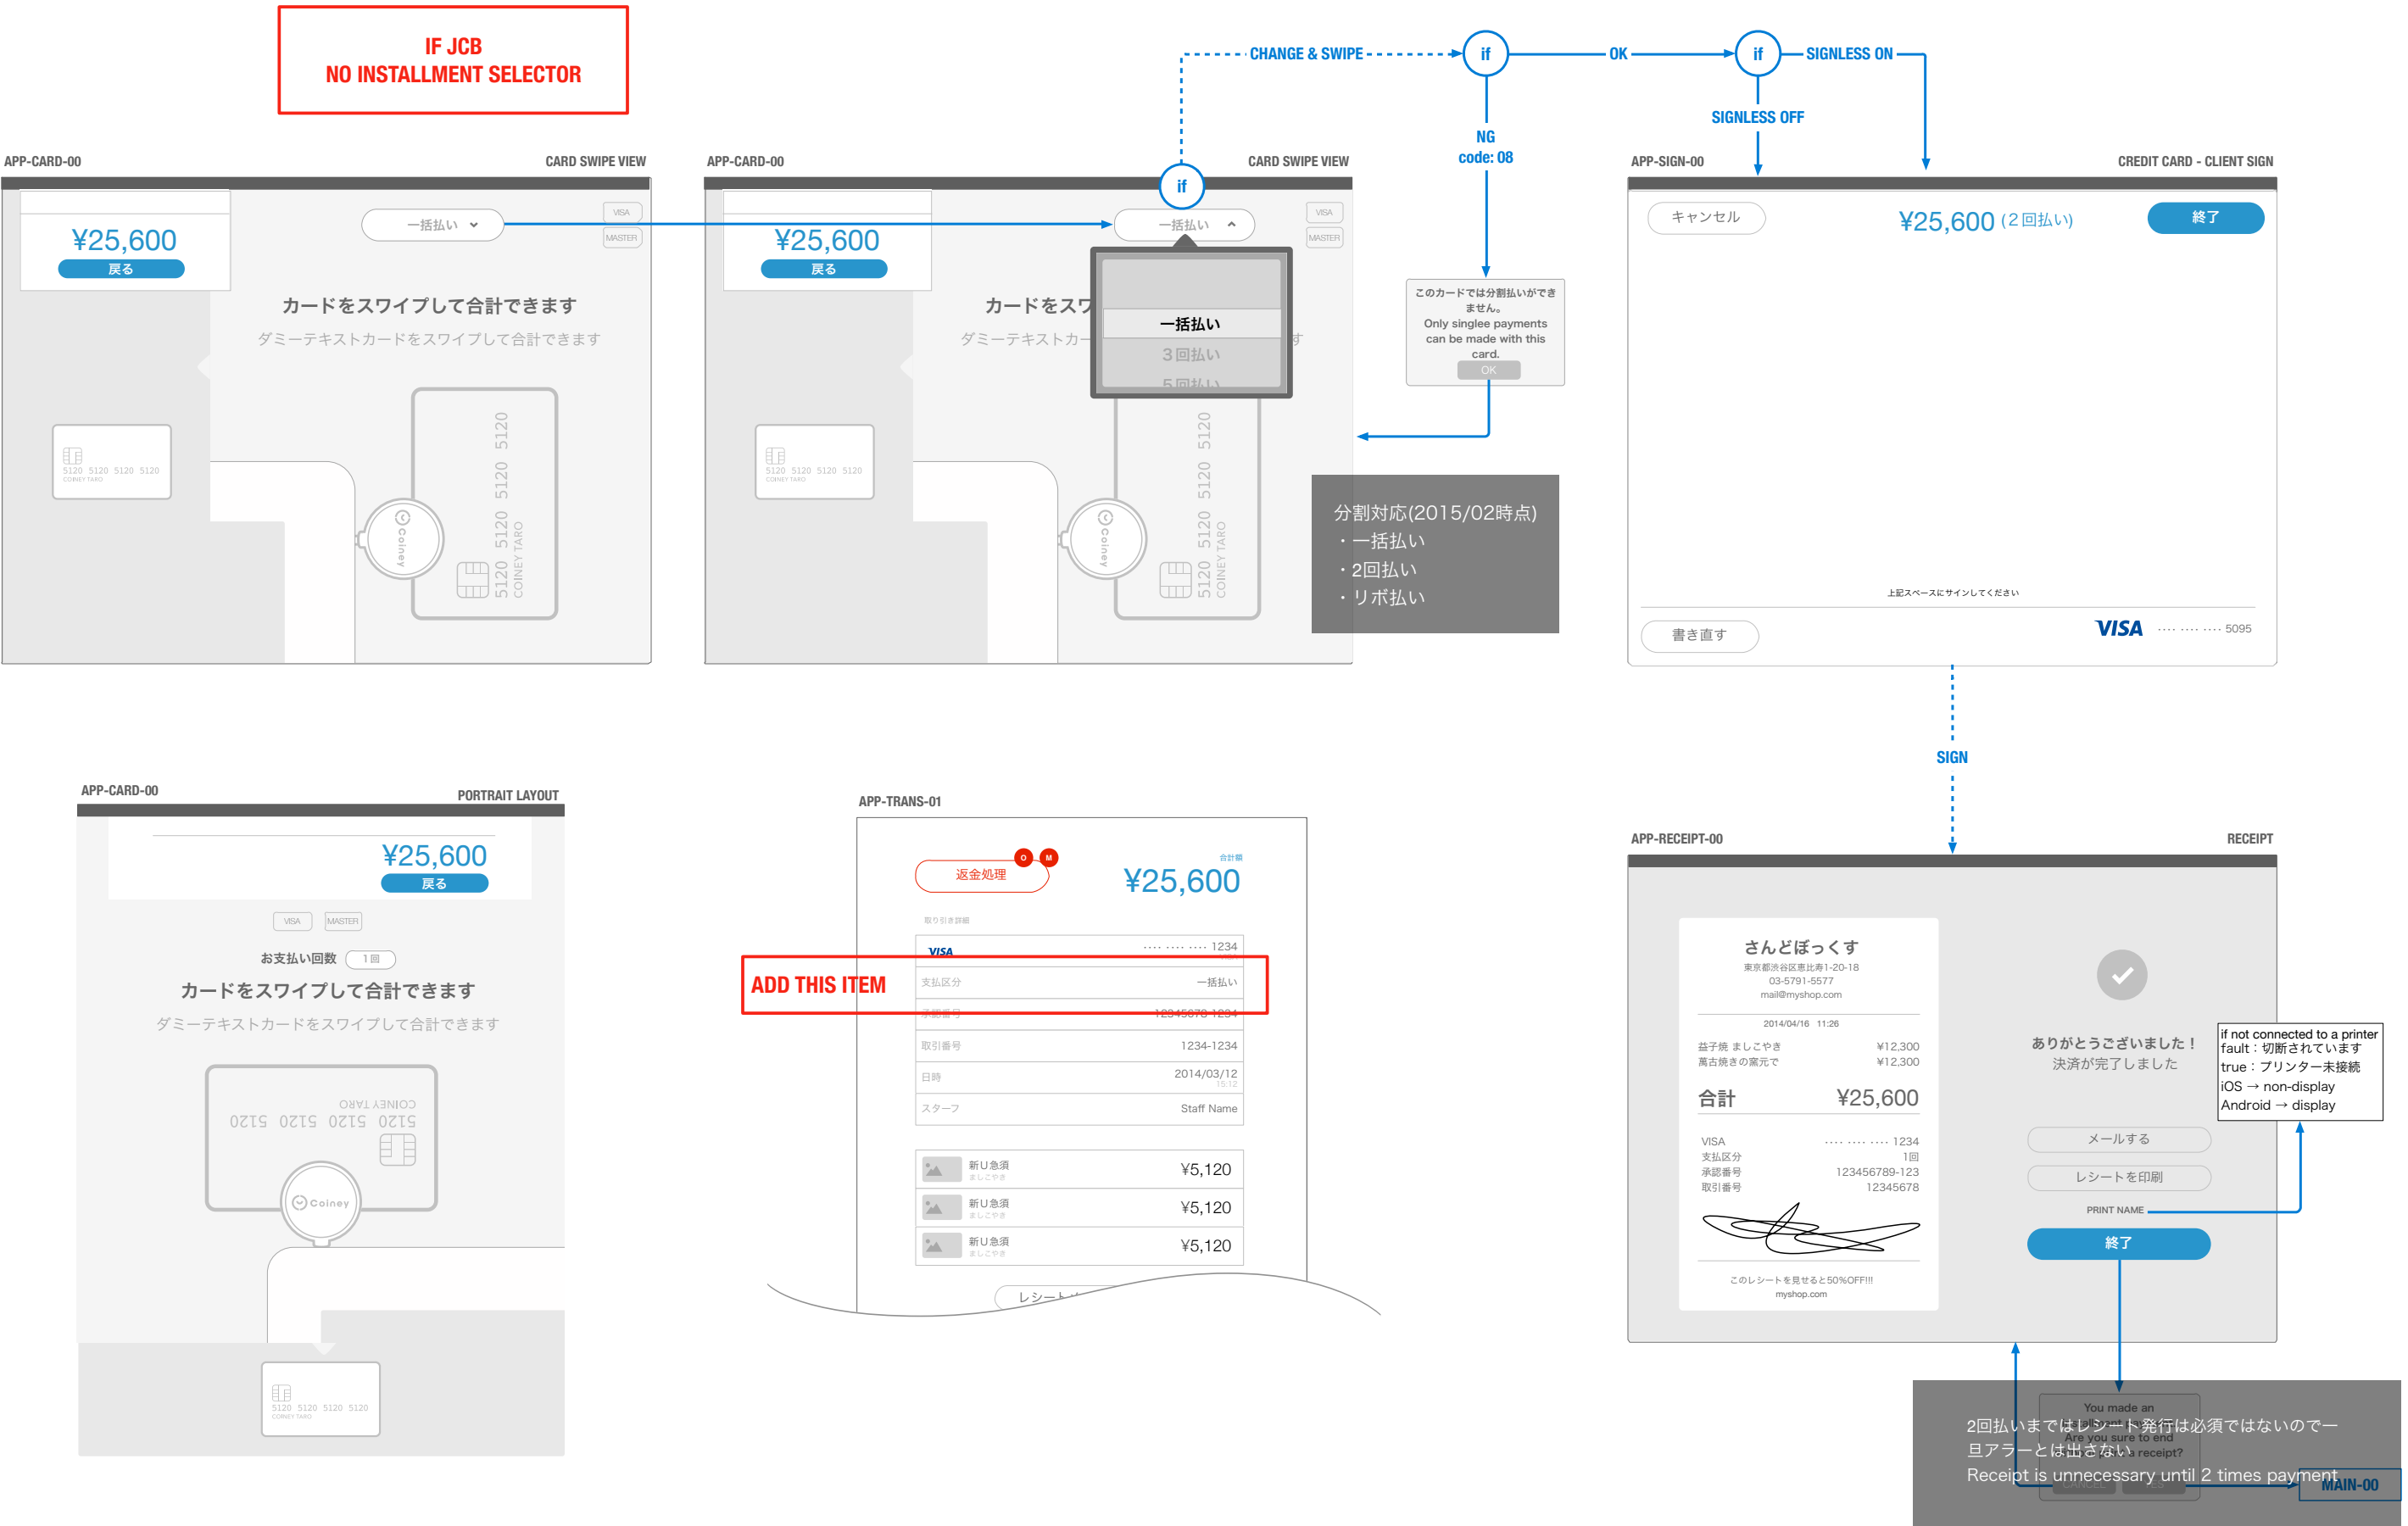

ANNOTATIONS

- 1. Received Money Input.** The user can input here the money received by the client.
- 2. Change.** Here will show the change the user have to give to the client.
- 3. Confirm button.** Only when the entered number is bigger than the shopping cart value this button become active.

FEATURE: INSTALLMENTS

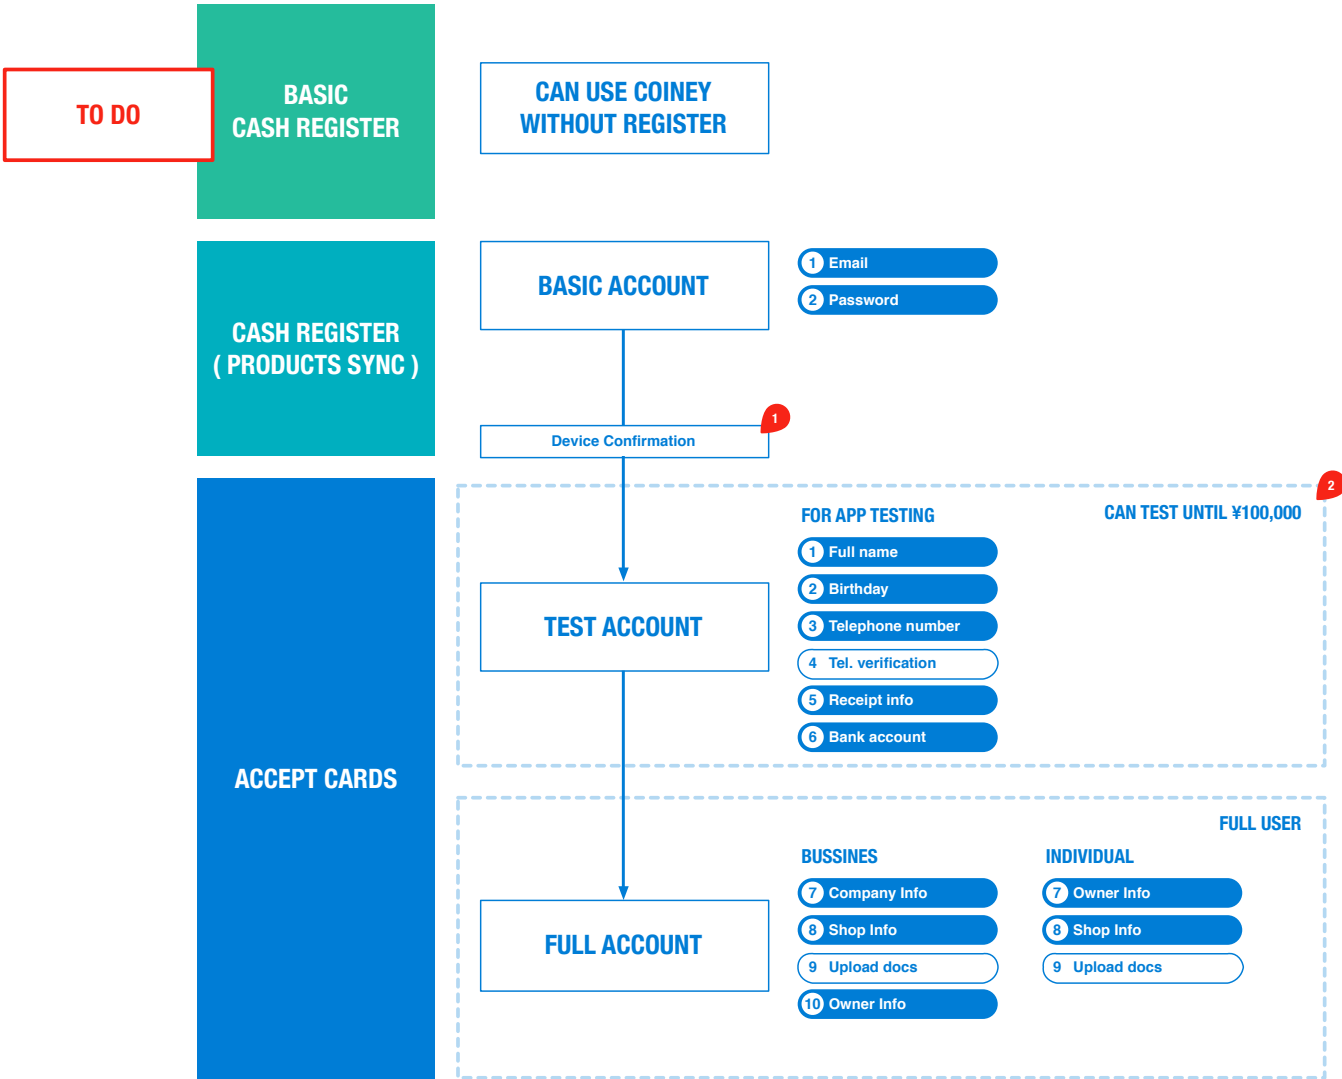

REGISTRATION FLOW

OC

TO BE REVIEW

After include free mode, without registration, flow must change.

R

ACCOUNT TYPES

ANNOTATIONS

1. **Device Confirmation.** Since we can use manually entered cards this is not so critical. But we have to show the user which are the limitations using his actual device.
2. **Casual Account.** This account type is to help to increase the number of users. This allows the user to test the application until ¥100,000 sales. In any moment the user can apply for a shop account.
